Trail-Weigh

The Trail-Weigh is an onboard weighing system, it allows drivers to know how much weight their truck is carrying without having to go to a weighing bridge..

Our system works by measuring the air pressure from the suspension which tells us an increase or decrease in weight, this way we can work out exactly how much weight the vehicle had on or had taken off.

- Reduces risk of overloading vehicle
- Reduces damage to vehicle
- Speeds up loading process
- **Reduces risk of DVSA pulling over**
- Saves time on queuing for weighing bridges
